DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-10, 12 and 13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Funke (DE 2906708) in view of Asaoka (JP 05169906).

Funke discloses an axle housing assembly comprising an axle housing having a differential housing (11), a cover (30) attached to the differential housing (see Figure 2) with an integrally formed housing body (8) and a pair of axle tubes (10) within the housing body (see Fig 2), support means (5,6) for supporting the axle housing to a base frame (26), a convex repulsive force receiving member (unnumbered, bolt hole of 17) integrally formed on the body for coupling the body of the housing to the support means (see Fig 2), wherein the differential housing includes a cover (30), wherein the support means includes a pair of axle brackets (5,6), a repulsive force receiving bolt (17), the axle brackets including a thick portion (unnumbered, left-side of bolt hole of 17).

Funke does not disclose the convex repulsive force-receiving member wherein a through hole is formed for receiving a fastener.

Asaoka discloses a repulsive force receiving member wherein a through hole is formed for receiving a bolt and a nut (see Fig 1) engaging with the bolt, the nut located

in an upper portion of the differential housing (since no frame of reference has been established, any direction can be considered up).

It would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the invention of Funke to include a through hole for receiving a fastener as taught by Asaoka in order to provide more a secure fastener means.

3. Claim 11 is rejected under 35 U.S.C. 103(a) as being unpatentable over Funke (DE 2906708) in view of Pegg.

Funke discloses an axle housing as described above, but does not disclose a recess surrounding the through hole for recessing the head of the bolt.

Pegg discloses a recess surrounding the through hole for recessing the head of a bolt (13).

It would have been obvious to one having ordinary skill in the art at the time the invention was made to modify Funke by including a recess surrounding a through hole for recessing the head of the bolt in view of Pegg for the purpose of preventing anything from catching on the bolt head.

Response to Arguments

4. Applicant's arguments with respect to claims 1-13 have been considered but are moot in view of the new ground(s) of rejection.
